

Dear Doctor & Staff,

Preparation is one of the keys to a successful conversion. Having the materials and equipment available and organized will speed up the conversion process and ensure that the patient (and you) are not inconvenience or delayed. Please have the following items available for the conversion when we arrive at the appointed time. Because Robertson Dental Lab technicians are not allowed to come into physical contact with the patient it is advised to have a chairside assistant scheduled to help with the conversion process.

DOCTOR OFFICE TO PROVIDE:

- Six feet of clear counter space / working area (not in same room as patient).
 - Need access to sink & water.
- Bite registration material and syringe style dispensing gun.
- Impression material (fast set material not recommended):
 - One dispensing gun (for the mouth) to use over each impression coping.
 - One dispensing gun for denture to fill intaglio of denture.
- Intraoral mirror (to view position of impression copings in relation to access holes drilled into the immediate denture.)
- Slow speed hand-piece (to adjust occlusion):
 - Acrylic cutting burs
 - Articulating paper
- Implant company specific screw drivers for implant parts (drivers used to unscrew the healing caps and screw in the restoration)
- Torque wrench (prosthetic screws are torqued to 15mm.)
- Composite material (to fill implant screw access holes.)
- Cotton or Teflon tape (to fill area between screw head and composite.)

ROBERTSON DENTAL LAB WILL PROVIDE:

- Conversion technician, portable lab equipment, and all materials.
- Immediate denture for conversion.
- Closed tray impression copings and driver.
- All necessary implant parts.
